Web Development

Besant Technologies

Web development:

- Creation of web applications.
- Two divisions:
  - Front end (client side development)
  - Backend (server side development)
- Front end: "what a user sees when they load a web application – the content, design and how you interact with it." - html, css, javascript.
- Backend: "what goes on behind the scenes of a web application". - php, java, perl, node.js python etc.,

Flask:

- Web framework for python.
