Datetime Module

Besant Technologies

Methods:

- import datetime
- datetime.date()
- tday = datetime.date.today()
- Tday.year, tday.day etc.,
- tday.weekday()
- tdelta = datetime.timedelta(days=7)
- tday +/- tdelta
- tdelta.total_seconds()
- Tdelta = date1-date2

datetime.time

- t=datetime.time()
- t.hour, t.minutes etc.,
- Dt = datetime.datetime()
- tdelta = datetime.timedelta(hours=12)
- datetime.today()
- datetime.now()
- datetime.utcnow()

sleep():

- Import time
- time.sleep(5)
- Execution time:
  - Starttime = time.time()
  - Endtime = time.time()
  - Exec_time = endtime-starttime
